

Tile Vent

Application

The Britmet tile vent is a discreet and efficient choice offering ventilation of the roof space and batten cavity.

- **For pitched roofs 15 – 45 °**
- **12,500mm² ventilation area**
- **can be manufactured for any profile**

Design

The vent design is designed using soft shapes, blending in with the roof surface. Rain water is diverted around the vent and there is an internal protective grill to keep out insects and driving rain. In order to fit to the roof profile, the vent is installed on a base plate shaped to fit the tile profile.

Colour and Surface

With a 100% colour and surface match, the vents are coated with stone granules and a clear acrylic overglaze.

Materials

The vent is manufactured using High Impact Polystyrene.

Handling

- Keep in original packaging during transport.
- Do not wrap and/or expose to heavy load during transport.
- Remove plastic bag before placing in sunlight
