## Slate 2000 on flat to pitch roof conversions

Britmet Tileform is able to offer a complete roofing solution that works perfectly with flat roofing systems. While flat roofs are generally cheaper to construct, they are seen to require a greater degree of maintenance. As well as this, flat roofs drainage systems are seen to be less effective compared to a traditional pitched roofs as ponding can be seen as a major issue.

We provide a service that allows us to convert your flat roof structure into a pitched roof; this is our flat-to-pitched roof conversion system called Britframe. An ever-popular roofing solution for a range of building types including schools, public buildings and a range of housing options.

We offer with this system the Britmet Tileform Slate 2000 lightweight roofing system. Which gives the same great aesthetics as traditional slate roof finish, to help match into the surrounding area. Available in a range of 6 colours and comes in two thicknesses a 0.45mm and 0.9mm for low and high foot traffic areas.

The combined of Britmets lightweight flat to pitch Britframe system and the Britmet Tileform slate 2000 gives our clients an attractive and long lasting, BBA approved maintenance free roofing system compared with any flat roofing systems.
