Plaintile

When it comes to traditional plain tile nothing matches the looks and style of the Britmet Plaintile, Used for vertical cladding and roofing projects throughout the UK. The Britmet Plaintile system has been specified on many housing projects, Including 56no houses for a project in East Midlands. The existing roofs had a concrete plain tile on, which where past their date. With server cracking to the tiles and the existing fixings deteriorating causing the tiles to slip down the roof and be a health and safety problem to the tenants. A new Britmet Tileform system was chosen.

Due to the design of the profile and strength of the Aluzinc based steel and tough and durable finish, the Plaintile can withstand attacks from vandals. All cracking, breaking or slipping of tiles are eliminated due the strong method of installation. Plaintile is a maintenance free roofing system which gives a superb roofing finish for all our clients social housing regeneration schemes.

The Britmet Tileform Plaintile also help reduce load stress off the building. The existing timber frame was under great stress from the heavy weight of the concrete tiles, weighing 60kg/m² causing the timber roof frame to bow and look unsightly. By using the Britmet Plaintile system, weighing only 8kg/m² reduced the loading onto the roof frame and foundations. The installer packed out the bowed timber and secured the frame, so the roof was straight and inline. The new Britmet Plaintile was installed, giving the roof the fantastic looks of a traditional plain tile, but with a much higher performance.
